

Finding participants based on genotypes

Emily Perry

8th July 2025

Data security

- This training session will include data from the GEL Research Environment
- As part of your IG training you have agreed to not distribute these data in any way
- You are not allowed to:
 - Invite colleagues to watch this training with you
 - Take any screenshots or videos of the training
 - Share your webinar link (we will remove anyone who is here twice)
- We will record this training and distribute the censored video afterwards

Questions

All your
microphones
are muted

Use the Zoom
Q&A to ask
questions

Upvote your
favourite
questions: if we
are short on
time we will
prioritise those
with the most
votes

Questions

**Magdalena
Drożdż**
Bioinformatician -
Research Services

Agenda

- 1 Introduction and admin
- 2 Genome assembly
- 3 LabKey tables of variant genotypes
- 4 Finding genotypes with IVA and Cohort Browser
- 5 The Small Variant and Structural Variant workflows
- 6 Aggregated variant files
- 7 When/why you would use each method
- 8 Help and questions

Materials

- Slides and video will be sent out to you after the session
- Scripts available in
/gel_data_resources/example_scripts/workshop_scripts/genotypes_2025

2. Genome Assembly

100,000 Genomes Project

Rare disease

GRCh37 (hg19)
GRCh38 (hg38)

Cancer

Germline GRCh37 (hg19)
Somatic GRCh37 (hg19)
Germline GRCh38 (hg38)
Somatic GRCh38 (hg38)

100,000 Genomes Project

Rare disease

GRCh37 (hg19)
GRCh38 (hg38)

Cancer

~~Germline GRCh37 (hg19)~~
~~Somatic GRCh37 (hg19)~~
Germline GRCh38 (hg38)
Somatic GRCh38 (hg38)

NHS GMS

Rare disease

GRCh38 (hg38)

Cancer

Germline GRCh38 (hg38)
Somatic GRCh38 (hg38)

Genome assembly coordinates

	GRCh37 (hg19)	GRCh38 (hg38)
ZAR1L	13:32,877,837-32,889,481	chr13:32,303,699- 32,315,363
ENST00000345108.6:c.931T>C	13:32,878,051	chr13:32,303,914

Converting between assemblies

Inside the RE

- Liftover tool on HPC
- Chain files in `public_data_resources`

Outside the RE

- Ensembl Assembly converter
- UCSC Liftover

3. LabKey tables of variant genotypes

LabKey

- Participant details and family relationships
- Sample details
- Genomic file locations
- Clinical data
- Bioinformatics analysis results
 - Rare disease tiering
 - Cancer tiering
 - Exomiser

Rare disease tiering

Rare disease tiering based on PanelApp genes

List ↑	Entity	Reviews	Mode of inheritance	Details
Filter Entities				8 Entities
Green	ATP1A3	1 review 1 green	MONOALLELIC, autosomal or pseudoautosomal, NOT imprinted	Sources - Expert Review - Expert Review Green Phenotypes 601338 614820 Tags

LabKey API

Combine queries between tables

Work in a variety of programming languages
(support for Python and R) using SQL
queries

Replicate queries between releases and
analyses

Work locally and on the HPC

LabKey .netrc

- You can access the same data via the LabKey API as you can through other means
- You will need to configure access to the LabKey API with your username and password
 - In your home directory
 - On the HPC
- You do this by editing a file called .netrc

Materials

- Slides and video will be sent out to you after the session
- Scripts available in
/gel_data_resources/example_scripts/workshop_scripts/genotypes_2025

Finding participants by genotypes in Python

Contents:

Use the LabKey API

Import Python modules you need

Helper function to access the LabKey API with Python

Querying the rare disease tiering data table

Querying the exomiser table

Querying the cancer_tier_and_domain_varian table

Querying the NHS GMS tiering_data table

Running workflows on the HPC

Small variant workflow

SV/CNV workflow

Using bcftools on the HPC

Optional exercise

A possible solution

Finding participants by genotypes in Python

This notebook will walk you through finding participants by genotypes. You are welcome to copy/paste any code from this notebook for your own scripts/notebooks.

Contents:

Use the LabKey API

- Import Python modules you need
- Helper function to access the LabKey API with Python
- Querying the tiering_data table
- Querying the exomiser table
- Querying the cancer_tier_and_domain_variants table
- Querying the NHS GMS tiering_data table

Running workflows on the HPC

Using bcftools on the HPC

Optional exercise

Use the LabKey API

Import Python modules you need

[32]: import numpy as npimport functoolsimport labkeyimport pandas as pd

Helper function to access the LabKey API with

Simple 0 3 Python 3 (ipykernel) | Idle Mode: Command Ln 1, Col 1 genotypes_training.ipynb

5. The Small Variant and Structural Variant workflows

Small variant workflow

Submit a list of genes

Find all short variants in these genes

Get 100k participants with these variants

Structural variant workflow

Submit a list of genes or regions

Find all structural variants overlapping these genes

Get 100k participants with these variants

Workflows genome assembly – 100k

Search by

gene	Should find all variants in the gene(s) on either assembly
coordinates (structural only)	You must also specify the genome assembly

Running workflows on the HPC demo

Python 3 (ipykernel)

Running workflows on the HPC

Small variant workflow

- ssh to the HPC with your usual login credentials
- cd into your working directory
- Make and cd into your working directory

```
mkdir small_variant_demo
cd small_variant_demo
```
- Copy the Small Variant workflow submission script into your folder

```
cp /pgen_int_data_resources/workflows/rdp_small_variant/main/submit.sh .
```
- Make the file gene_list.txt and add your list of genes to it

```
vi gene_list.txt
```

 Add SMC3 to the file
 Esc :wq
- Edit the submission script:

```
vi submit.sh
```

 Change the project_code to your code Change the gene_input to gene_list.txt
 Esc :wq
- Run the workflow

```
bsub < submit.sh
```
- Find your results when the job is finished

```
[18]: small_variant_results = pd.read_csv('small_variant/results/GRCh38_small_variant_results
      /resources/conda/miniconda3/envs/2022_base/lib/python3.7/site-packages/IPython/core/interactiveshell.py:3186: DtypeWarning: Column
      s (101) have mixed types.Specify dtype option on import or set lo
      w_memory=False.
      interactivity=interactivity, compiler=compiler, result=result)
```

Cancer

Germline GRCh38 (hg38)
Somatic GRCh38 (hg38)

Aggregate VCFs

Aggregate VCFs

Aggregate VCF chunks

- Locus-based queries must query the correct chunk file
- BED file of chunks available
- Create a sorted BED file of your own regions
- Intersect with BEDtools
- Code books with more information
- Also available in Plink2 format

Using bcftools on the HPC demo
